

Overcoming Covid Together

Our neighbors with intellectual and developmental disabilities, autism, and related conditions must know that vaccine administration sites are safe and accessible.

AshBritt teamed up with Autism Speaks to create the **Autism Friendly Vaccine Experience Toolkit**, a first-of-its-kind resource to support individuals with autism and related conditions at community vaccination centers across the country and to educate and guide those administering the vaccines.

The Toolkit is a free resource for anyone to use and can be found on the **Autism Speaks** and **AshBritt** websites. The Toolkit includes the following documents:

Welcoming People with Autism and Related Conditions to COVID-19 Vaccination Sites:

A guide to establishing accessible and inclusive best practices at vaccine sites.

Getting the COVID-19 Vaccine, A Guide for People with Autism and Related Conditions and Their Support People:

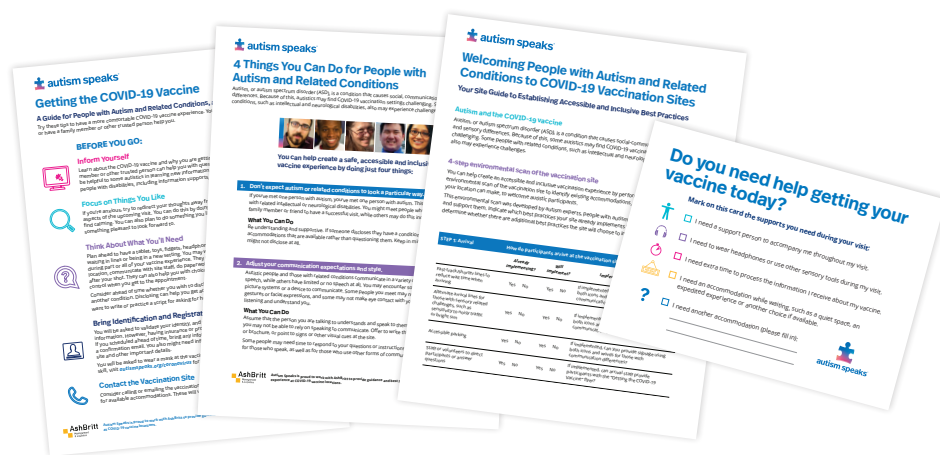

Information for individuals with autism and their families or support provider.

4 Ways to Support People with Autism:

A quick reference guide and checklist with requirements for on-site staff.

Accommodations Request Card:

A document to help individuals and families communicate their need for accommodations to help make the experience positive for them.

Autism Speaks is proud to work with AshBritt to provide guidance and best practices on creating an autism-friendly experience at COVID-19 vaccine locations.
